DATABASE

Creating a mysql or mariadb database on Ubuntu Server 22.04

Be Advised,
whenever you see the # symbol, this is a comment or a note which will be ignored by the computer system, and won't be executed by the computer.

#1st start by securing your database and creating a root
#password to log into the database, you do this by running the
#the script below
sudo mysql_secure_installation

#after running the script above and you have your root password
#log into the database with the following command
sudo mysql -u root -p

DBname - ourdb
Username - user1
DBpasswd - mypasswd1

install database and user manually in

mysql

#create database
mysql-cmd> CREATE DATABASE ourdb;
db name -
ourdb

#create user for database
mysql-cmd> CREATE USER user1@localhost IDENTIFIED BY 'mypasswd1';

db username -
user1

db passwd -
mypasswd1

#assign required privileges
mysql-cmd> GRANT ALL PRIVILEGES on ourdb.* to user1@localhost;
